DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Stojanovic et al (US 2004/0203559).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Claim 14.

Stojanovic et al discloses a clock recovery method and circuit (see Fig. 26), comprising; sampling a data stream (D_N) using a receive clock (SCLK, 210) to generate sampled data (see paragraph [0116]);

monitoring (605) the sampled data for data transitions of a plurality of possible data-transition types (see paragraph [0116]);

Page 3

Application/Control Number: 10/797,443

Art Unit: 2611

automatically selecting a subset of the data transitions based upon the monitoring (see paragraph [0116]); and

adjusting the receive clock relative to the sampled data using the subset of the data transitions (see paragraph [0118]).

Claims 15 and 16.

Stojanovic et al discloses the data signal is a 4-PAM signal. See paragraph [0125].

Allowable Subject Matter

- 3. Claims 1-13, 23-42 are allowed.
- 4. Claims 17-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Y. Kim whose telephone number is 571-272-3039. The examiner can normally be reached on 8AM --5PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on 571-272-2988. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
